

# Guard'n Grow

CHLORINE REMOVAL SYSTEM

For Healthier, Mineral and Vitamin  
Rich Food for your Home Garden

100% recyclable media

A "Must Have" for every Organic Gardener

This simple  
**GUARD'N GROW**  
unit will produce  
up to 25,000 gallons  
of chlorine free water  
for the home garden.

\*8000 minutes of  
watering!

Guard your plants and food that you eat from the harmful effects of chlorine in the water. Chlorine kills and minimizes the microbiology in soil that is vital in converting minerals into forms that nourish the plants and ultimately the consumer of the foods produced. Dead soil produces mineral and vitamin deficient food.

\*To give you an idea of the life of the **GUARD'N GROW**, unit, the water requirement for tomatoes is 140 gallons in a typical 10 week growth cycle to yield 20 pounds of tomatoes. The **GUARD'N GROW** will produce enough chlorine free water for **1 1/2 Tons of Tomatoes!**

**Dime WATER**  
the standard of excellence
